

Spring Edition: April 2020

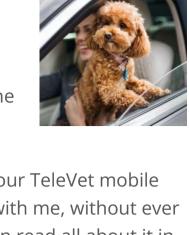

Just a few months ago, life was so much simpler. We ran errands, met friends after

work and hit the gym without a second thought. That changed with the emergence of

COVID-19. Faced with health updates that seemed to change by the hour, medical providers, like us, worked swiftly to implement new ways to care for our patients in safe, sometimes innovative settings. Last month, <u>Animal Vision Center of Virginia</u> began offering new drive-up telehealth appointments, allowing you to stay in your car

video or voice telemedicine phone conferencing, we obtain a complete history on your pet's progress, allowing you to be "present" for the appointment. Then, we take your pets back to the car with follow-up instructions and medication (if needed). We've also seen a number of our existing clients remotely, using our TeleVet mobile app, providing a two-way consultation appointment in real time with me, without ever leaving your home. If this is a service you haven't tried yet, you can read all about it in the article below.

while our staff escorts your pets to the clinic for their exam. Via

In addition, we have remained diligent about the utmost cleanliness of the practice, implementing enhanced protocols that are effective against viruses, including coronaviruses. And we are fully stocked with medications and supplies. We appreciate so much your willingness to do things a little differently over the past

few weeks. These are unusual times to be sure, and we will continue to adapt further if needed. Our goal remains the same, to provide the best ocular care possible for all animals—even in a changing world.

All the best, Keatha Brookslive Dr. Heather

surgery. We thought it would be helpful to explain what happens before, during and after surgery so you can plan accordingly.

Cataract surgery is very similar to cataract surgery in people. A small incision is

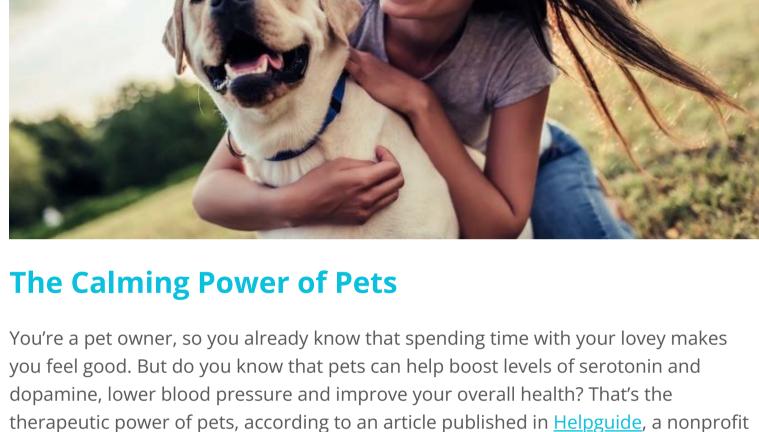

We often see clients from out of the area, who travel to see us for their pet's cataract

made at the top part of the eye, and a circular hole is created within the outer flexible capsule of the lens. Ultrasound energy is used to remove the internal cloudy lens material. The capsule is polished, an artificial lens is implanted, and the incision at the top of the eye is closed with suture.

The surgery schedule unfolds over three days, with a pre-operative evaluation and full assessment with Dr. Heather on day one; pre-operative preparation, surgery and postoperative monitoring on day two; and a post-op exam on day three. Before you depart for home on the third day, we will show you how to care for your pet, administer medicine; explain the stages and what to look for with your dog's

recovery; and schedule follow-up exams.

wonderful companions for children, helping them grow to be more secure and active. If social distancing is making you feel a bit removed, spend more time with your pet. Take them on walks, snuggle with them on the couch, play fetch in the yard or teach them a new trick. And, if you know a friend who could use a companion, put them in

touch with any of the local animal adoption and rescue groups featured on our <u>In</u>

Focus blog. Adoption will be good for them—and their new furry friend.

Vaida Moore founded the Feral Affairs Network (FAN) in 2016 to help address the problem of overpopulation of community cats in Hampton Roads. The nonprofit organization's primary goal is to trap-neuter-return (TNR) feral or community cats to their environment, while providing support to their caretakers in need. Ultimately, this results in a happy, healthy and safe

What is your background and why did you decide to launch FAN?

and posed a few questions about FAN.

When It Comes to Caring for Feral Cats, Vaida

Moore is a FAN

Cats have captured my heart since I was a little girl. I started volunteering at the Norfolk Animal Care and Adoption Center in 2009 and soon became very involved in all aspects of animal care, from fostering to adoption and beyond. At the same time, I became more aware of the problem of animal overpopulation, especially when it comes to cats. One particular group of feral or community cats caught my attention, and I started researching possible solutions. That is when I learned about trap-neuter-return (TNR). I bought a couple of traps and started my own operation as a one-woman team. I was amazed to find a big community of feral cat advocates here locally, working to reduce their overpopulation and suffering, at the same time providing much needed relief to the overcrowded municipal animal shelters.

operation possible. Today FAN is a nonprofit 501(c)(3) organization whose primary goal is to trap-neuterreturn (TNR) feral or community cats and also provide support to their caretakers in need. Our ultimate goal is happy, healthy and safe community cats throughout Hampton Roads and a strong caretaker network working together to support and care for community cats in every way possible.

With some experience and valuable connections under my belt, I decided that it was
